## 3 - OVERVIEW

The Doge Dealer was developed with the intent to start a new trend within crypto. Scott, the founder and developer, created the idea after realizing just how effective referral systems are in real-world businesses. But the blockchain allows for something that hasn't even been done before in these businesses. It allows for fully transparent and instant payouts of rewards, and the potential to scale to sizes that are unheard of when compared to multi-level-marketing companies that sell physical products. Crypto is digital, and when backed by the speed and transparency that the Binance Smart Chain brings, the Doge Dealer's innovative referral system is set to thrive like no other coin has before.

Doge Dealer is the first-ever token with built-in instant referral rewards and a unique referral train system, along with passive rewards that are dealt out automatically every 60 minutes in selectable payout token chosen by the user.

The core features of the \$DogeDealer token are built off three main systems within the code: the referral, referral train, and passive earn-anything components. They are outlined below, under the fee description.

## 4 - FEES

### BUYS (16%)

[referral not accepted]

- 8% Referral (5% to primary, +3% to pay train [2.5%/0.5%]. If no train, send to contract for earn rewards)

- 3% Marketing

- 2% LP

- 3% Passive Earn Rewards

### BUYS (11%)

[if referral accepted]

- 8% Referral (5% to primary, +3% to pay train [2.5%/0.5%]. If no train, send to contract for earn rewards)

- 1% Marketing

- 1% LP

- 1% Passive Earn Rewards

### SELLS (16%)

- 0% Referral

- 3% Marketing

- 2% LP

- 11% Passive Earn Rewards

## 5 - REFERRAL SYSTEM

Doge Dealer has pioneered the first-ever token with a built-in referral system that pays out instant referral rewards. On top of this, a “referral train” system has been integrated into the code, allowing referrers to earn potentially exponential referral rewards. This is explained in the next section. Below is the explanation on the basic referral system in place.

Users are incentivized to use referral links, by giving them a smaller buy fee after they have accepted one. Instead of paying 16% tax on a transaction, they will pay only 11%. Referral payouts remain unchanged (the reduced tax is taken from the marketing tax mainly).

In order for a user to earn referral rewards, a buyer must accept their corresponding referral link and then place a buy order through PancakeSwap. After clicking the referral link, the buyer is brought to our Dashboard and a confirmation box appears. Upon clicking accept, a MetaMask transaction pops up to send a contract interaction, which will accept the referral for the buyer and log the event in the blockchain. After this is complete, any buys the buyer places (no matter if they are placed through our Dashboard, or through PancakeSwap directly) will instantly have a 5% fee deducted and sent to the referrer.

### Important Notes:

- Users are incentivized to accept referrals, through offering a smaller tax on all buys they place (11% instead of 16%).
- Referrers cannot be changed once one has been accepted.
- Referrers receive the direct 5% fee bonus, plus any referral tree bonuses (explained in the next section), on all buys their referred users place – forever. There is no maximum reward or referral amount.
- Once a referral is accepted, it doesn't matter where a buy order is placed from - all fees will still be sent to the corresponding referrer. Transactions can be sent through PancakeSwap's site, or our own dashboard.
- Users will be able to automatically convert referral rewards from \$DogeDealer token to their payout token.

## 6 - Referral tree system

Doge Dealer's referral tree system technically exists within the main referral system, but for educational purposes we've separated the two. The purpose of the tree is to give potentially exponential awards to referrers, and to incentivize referrers to tell their referred users to share their own links.

Basically, if a buyer was referred by someone, and the referrer was also referred by someone, then that person would get an instant referral bonus too (2.5% to be exact), while the primary referrer also would receive their 5% bonus. This tree extends three "branches" deep – so there can be a primary (5% bonus), secondary (2.5% bonus), and tertiary (0.5% bonus) beneficiary to these rewards. View the diagram for a visual explanation of this.

This system enables potentially exponential rewards to people that are constantly referring others, or are encouraging their referred users to share their own links! The bigger the buyers, the bigger the rewards. The bigger the referral chain, the more passive income for referrers!

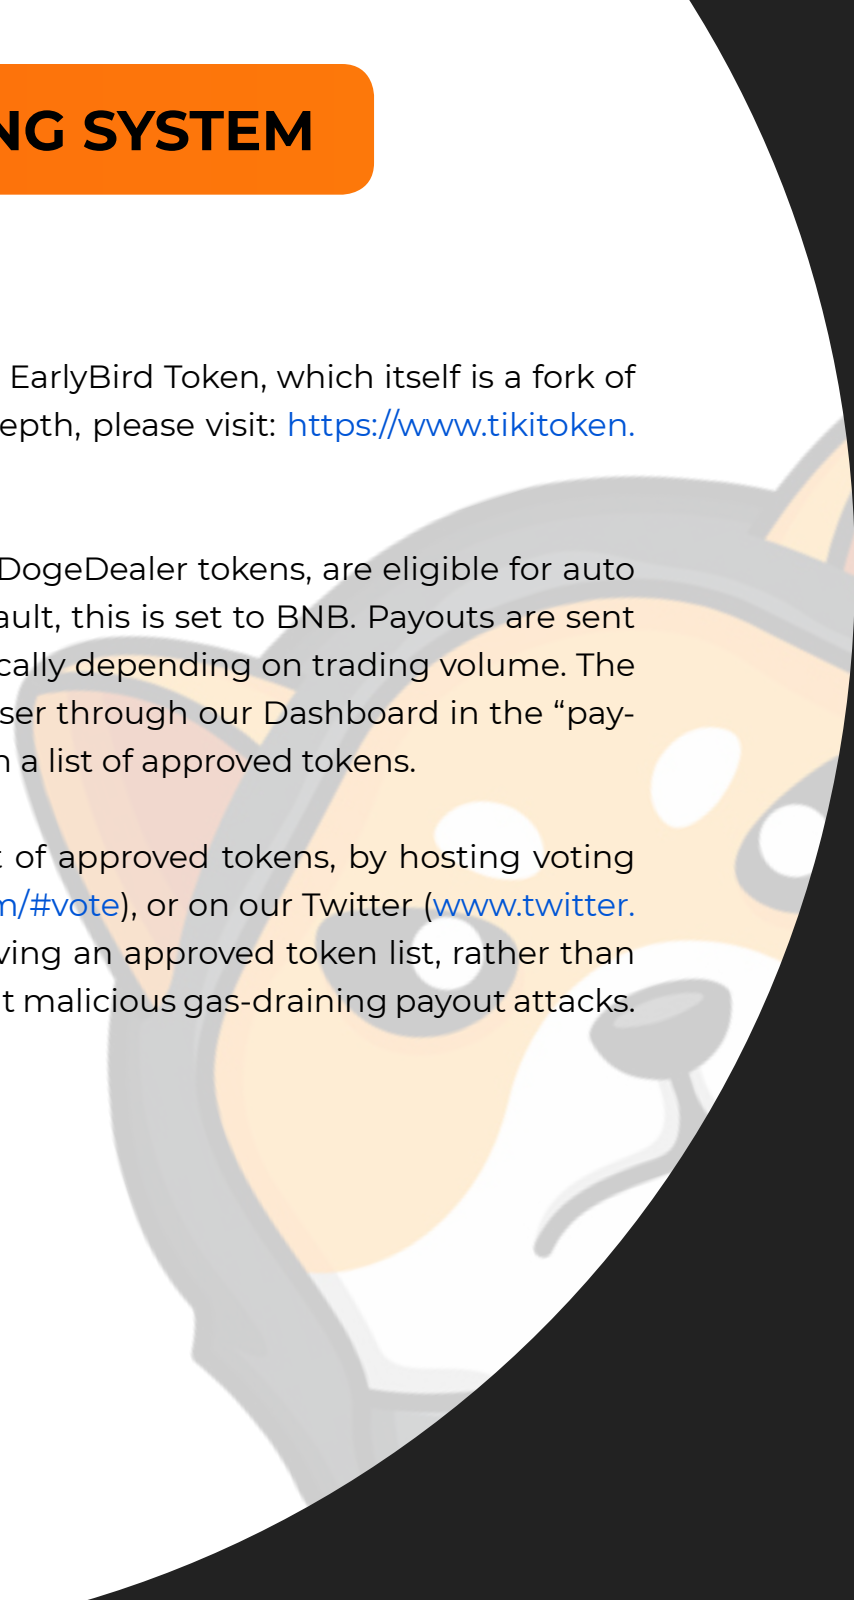

## 7 - PASSIVE EARN-ANYTHING SYSTEM

Our passive earn-anything system is forked from EarlyBird Token, which itself is a fork of TIKI Token. To learn more about this system in-depth, please visit: <https://www.tiktoken.finance/whitepaper>.

In summary: all users that hold 10,000 or more \$DogeDealer tokens, are eligible for auto distributions in a token of their choosing. By default, this is set to BNB. Payouts are sent on average every hour, but this changes dramatically depending on trading volume. The payout token can be changed individually by a user through our Dashboard in the “payout token” dropdown. This dropdown is filled with a list of approved tokens.

Occasionally, we will add a new token to our list of approved tokens, by hosting voting events on our website ([www.DogeDealerCoin.com/#vote](http://www.DogeDealerCoin.com/#vote)), or on our Twitter ([www.twitter.com/DogeDealerCoin](http://www.twitter.com/DogeDealerCoin)). The reasoning behind having an approved token list, rather than letting the user input their own token, is to prevent malicious gas-draining payout attacks.

## 8 - LEADERBOARD COMPETITIONS

Within our Dashboard users are able to view leaderboards based off global referral statistics. Entries are sorted, by default, by referral rewards received (paid out in the native \$DogeDealer token). The viewer can sort by referral count too, and also has the option to view daily, weekly, monthly, and all-time leaderboards.

Competitions will be held for referrers, with exclusive NFT rewards being given out as prizes, along with BNB. To avoid abuse, leaderboards will be sorted by “referral rewards received” during these competitions, since a malicious user can create fake accounts to refer, in order to increase their referral count at a minimal cost. Abusing the actual referral rewards stat would lead to a severe loss in BNB value due to other taxes present when buying and selling \$DogeDealer tokens.

## 9 - LOCKED/UPCOMING FEATURES

All of the aforementioned is not all that The Doge Dealer has to offer, however! Included in the contract is a fully-fledged staking system, along with the option for users to automatically and instantly convert referral rewards into BNB or their payout token of choice! These features will be enabled shortly after launch as “updates” - stay tuned in our Telegram and on our Twitter for announcements.

## 10 - CONCLUSION

If you have any other questions or comments about the Doge Dealer and the team behind it, feel free to reach out in
